

These instructions are to ASSIST you in the Iveri Whitening process. As a Dental Professional use your discretion as each individual client is different and may require additional treatment.

Client should read and sign Iveri Whitening Consent Form.
For Optimum Results a Professional Cleaning is Recommended.

STEP 1

Application of Liquid Dental Dam
Use Cheek Retractor to Retract Cheeks
Dry Gums using Gauze or Air Water Syringe
Apply Liquid Dam around Margins of the gums
for Mandible & Maxilla

Light Cure using Blue LED Light for 5-10 Seconds

STEP 2

Insertion of Gel-Lined MouthTray
Advise Client to Bite Gentle into the Tray
Gel can be Maneuvered, if patients teeth are tilted or rotated,
by applying Lite pressure to the tray with your fingers.

STEP 3

LED Light
LED Light is placed in front of Gel Lined Tray for 15-20 minutes

STEP 4

End of Procedure
Gel Lined tray is removed
Client can Rinse with water
For Additional Session(s) do not remove liquid dental
dam from gums. Repeat steps 2-4 otherwise dental
dam can be removed
